provide tomorrow's
business solutions,
today.

Real Time
and
Linux.

It Just

Linux was originally created in 1991 by Linus Torvalds, a graduate student seeking an affordable, highly adaptable version of the Unix system. To expedite the process, Linus solicited the help of other programmers by making all of his information about the operating system—the entire source code—available on the Internet.

Works!

Real Time Enterprises offers design, installation, customizing, consulting, and maintenance services on an hourly or contract basis.

Developers responded with many ideas. Linux implemented them and shared the results. As word spread about the Linux operating system and its open, evolutionary style, the benefits and potential of **open source** development were recognized. Thousands of developers from around the world joined the effort and quickly added the functionality and features commonly found in proprietary systems.

Within its open environment, Linux evolution continues today with a growing Web-based community of committed programmers, developers and users. Collectively, they are constantly scrutinizing, developing, improving, testing and collaborating to ensure Linux remains an exceptionally stable, secure and robust operating system with a vast assortment of programs and utilities, as well as unlimited customizing potential. Real Time Enterprises is proud to be an active, long-standing member of this diverse community. In the Twin Cities, Real Time is the leader in Linux support.

Secure.
Reliable.
Cost-Effective.

Linux is secure, reliable and cost effective. Upgrades and modifications can be done *without shutting the system down*. In fact, many tasks can be done remotely, with little or no interference with operations.

Efficiency is another key to Linux's success. It runs very well on any Intel or PC-based hardware, even your existing 486 with 32MB RAM! With Linux, your computer hardware investment will last longer than next month's software.

System upgrades, quick fixes, new software applications and drivers are readily available at a minimal cost, or the cost of installation alone. Linux is designed to allow your computer system to change as your business needs change - securely, quickly, and economically.

With full networking, secure remote administration and integration capabilities, Linux is leading the industry in providing complete desktop functions for end users.

Along with the support of many important hardware and software manufacturers such as IBM, Oracle, Sun Microsystems, and Hewlett Packard, Linux is the true alternative to traditional operating systems from Microsoft and Novell.

Enhance Your System with Custom Network Integration.

If your staff works well with your current system but stability or speed is not where you need it to be—Real Time and Linux have the solutions. Since Linux supports most protocols, including TCP/IP, IPX/SPX, NetBEUI, and AppleTalk, Real Time can integrate Linux solutions with your existing system. By providing the benefits of Linux in the background, you will achieve top performance from your current system.

Enhance your existing system with high quality Linux servers. Choose from a variety of packaged solutions such as Mail Server, Web Server, File Server, Proxy Server, DNS Server or Firewall protection. Real Time can also create a more custom solution tailored to your specifications. We can design a network based on your needs that will be more cost effective than trying to adapt your business to a pre-installed system.

Real Time will provide everything you need to maintain a full or integrated Linux network. With scheduled quarterly maintenance, you can be assured of receiving the latest information and updates. As an outsourced IT department, our highly trained professional staff will provide you technical support at an economical value.

Why wait for a network problem to hurt your company's ability to compete? Call Real Time for a technical network evaluation or for a free sales consultation.

Talk to Real Time about great Linux solutions for your business.
